About ATS' 3D BIM Families and Standards

Highly Optimized for Speed

Spec Solutions' 3D BIM Families are approximately 50% smaller in file size, so you can save and share files easily. To increase project productivity and efficiency, all families include only the necessary details, while maintaining Watts' product family integrity.

Customized for Flexibility

Spec Solutions' 3D BIM Families make editing effortless. They are easily edited vs. "block" files, which are created when files are initially converted from PRO-E or another program to Revit.

Tested for Reliability

ATS' 3D BIM Families are tested for accuracy prior to posting, to ensure that they work flawlessly when inserted into projects.
