

RD-300-AC

Adjustable Extension Compression Seal Roof Drain

The patent-pending RD-300-AC roof drain with its highly reliable compression seal helps significantly reduce the risk of leakage and water damage, problems often experienced with other roof drains. Its creative design supports flexible height adjustment from 1" to 3.125".

The epoxy-coated cast iron roof drain has a flashing clamp and integral gravel stop, self-locking polyethylene dome (standard), and no hub (standard) outlet.

Features include:

- **Reliable, watertight, leak-free seal protects against leaks.**
- **By replacing the rust-prone and difficult-to-turn threads as well as the leak-prone O-ring other roof drains use, the RD-300-AC eases roof drain adjustments while reducing the threat of leaks and water damage.**
- **Compression seal technology provides the flexibility needed for adjusting to the correct finished height.**
 - **2", 3", 4", 5", 6", 8", and 10" outlet sizes support different drain requirements.**
