### Pressure Reducing Control Valve with Return Flow Feature

#### Features

- Throttles to reduce high upstream pressure to constant lower downstream pressure
- Return Flow Feature opens valve when downstream pressure is higher than upstream
- Reducing setpoint is adjustable

#### Standard Components

- 1 - Main Valve (905GD - Single Chamber)
- 2 - Pressure Reducing Control
- 3 - Check Valve
- 4 - Fixed Orifice
- X - Isolation Cocks

#### Options and Accessories

- FC - Flo-Clean Strainer
- Y - Y-Strainer (Replaces Flo-Clean)
- ACS - Adjustable Closing Speed (Replaces Fixed Orifice)
- AOS - Adjustable Opening Speed
- P - Position Indicator
- L - Limit Switch

#### Operation

The ACV Pressure Reducing Control Valve with Return Flow Feature is designed to automatically reduce a fluctuating higher upstream pressure to a constant lower downstream pressure regardless of varying flow rates, and open for return flow when downstream pressure exceeds inlet pressure. It is controlled by a normally open, pressure reducing pilot designed to: 1) Open (allowing fluid out of the main valve cover chamber) when downstream pressure is below the adjustable setpoint, and 2) Close (allowing fluid to fill the main valve cover chamber) when downstream pressure is above the adjustable setpoint. A decrease in downstream pressure causes the valve to modulate toward an open position, raising downstream pressure. An increase in downstream pressure causes the valve to modulate toward a closed position, lowering downstream pressure.

If downstream pressure becomes greater than upstream pressure, the valve opens allowing the higher downstream pressure to return to the upstream pressure zone. Normal Pressure Reducing operation resumes when upstream pressure exceeds downstream pressure.

\*The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.
