

TECHNICAL INSTRUCTIONS

BILTMORE Series 900

Pressure-Balancing Valves

Model 3

DESCRIPTION

The BILTMORE is a pressure-balancing mixer which delivers a predetermined mix of hot and cold water by compensating for pressure fluctuations in the hot and cold water supplies.

The BILTMORE features a poppet design valve as part of a replaceable balancing cartridge. The poppet-type construction offers two distinct advantages: It will not stick due to lime build-up or foreign particles in the supply water, and it has a quick reaction time. The adjustable maximum temperature stop prevents overadjustment of the handle.

Safety feature: Should either supply fail, the BILTMORE reduces the flow of water to prevent a continued spray of all hot or all cold water.

Capacity 4.6 gpm @ 45 psi

SPECIFICATIONS

[15 L/min @ 310 kPa Differential]

Maximum Static Pressure 125 psig [862 kPa]

Maximum Inlet Temperature 180°F [82°C]

Inlet and Outlet Sizes 1/2" sweat or NPT thread

Rough-in Guide All Models

Handle Rotation Stop All Models

Listing ASSE 1016 Type P

Certified CSA B125

APPLICATION

The BILTMORE is particularly recommended for shower and shower/tub installations in hotels, motels, high-rise apartments, condominiums, and single-family housing.

OPERATION (See Figure 1)

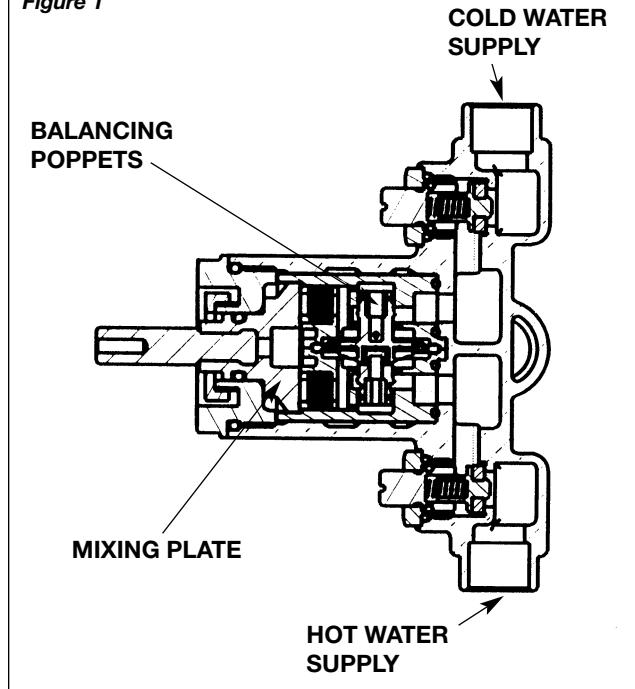

Pressure balancing valve (Type P) senses incoming water pressures and compensates for fluctuations in either to stabilize outlet temperature. The entire balancing poppet assembly is contained in a chamber. This chamber is replaceable as a complete cartridge. The hot and cold are mixed by the action of the mixing plate. As the temperature adjustment stem is rotated from shutoff to maximum hot water discharge temperature, the mixing plate passes the required proportion of hot and cold water to produce the desired water temperature. With the adjustment stem in its full clockwise position, shutoff is obtained by closing off both supplies.

The maximum temperature limit stop (located on the bonnet) allows the user to set the desired maximum discharge temperature. This mixer does not compensate for supply water temperature changes, so any variation in the water temperature will affect the control point and the maximum discharge temperature setting.

CAUTION: Maintenance of the unit requires resetting of the maximum temperature adjustment stop. As inlet temperatures vary from site to site and season to season, failure to properly adjust the maximum temperature adjustment stop can result in excessive hot water delivery.

Figure 1

MAINTENANCE/TROUBLESHOOTING

What to look for if:

1. The flow of water is less than desired.

- a. Valves upstream from supply not full open
- b. Low inlet water supply pressure(s)
- c. Accumulation of lime deposits in hot water pipes, restricting flow of hot water
- d. Showerhead clogged
- e. Checkstops obstructed or jammed

2. The flow of water is completely shut off.

- a. Valves upstream from supply completely closed
- b. Failure of hot or cold water supply pressure, the mixer is designed such as to restrict the flow of water on hot or cold water supply failure
- c. Checkstops are closed

3. The flow is untempered hot or cold water.

- a. Hot water supply temperature is too low
- b. Diaphragm is ruptured; replace with new balance chamber

4. The flow of water continues after mixer is shut off.

- a. Worn shutoff discs; replace shutoff discs
- b. Foreign particles on mixing plate causing scratches; replace stem and plate
- c. Bad O-rings on the inlet ports of cartridge; replace.

5. The maximum temperature is low.

- a. Accumulation of lime deposits in hot water pipes restricting flow of hot water
- b. Concealed maximum temperature stop is not at desired adjustment point
- c. Hot water supply temperature is too low

6. The valve opens with hot water flow rather than cold water flow.

- a. Inlet water supplies are connected to the wrong ports; see instructions below on reversed inlets.

Cold into hot, hot into cold

If reversed inlets are required due to back-to-back instal-

REVERSED INLETS

lution, close check stops. Remove High Temperature Limit Stop. Unscrew bonnet. Rotate stem 180. **The word "TOP" stamped on stem must face down toward tub outlet.** Reinstall bonnet. Place High Temperature Limit Stop on bonnet.

NOTE: Hot and cold inlets should be re-identified for reversed inlets to avoid confusion during future maintenance.

SERVICING

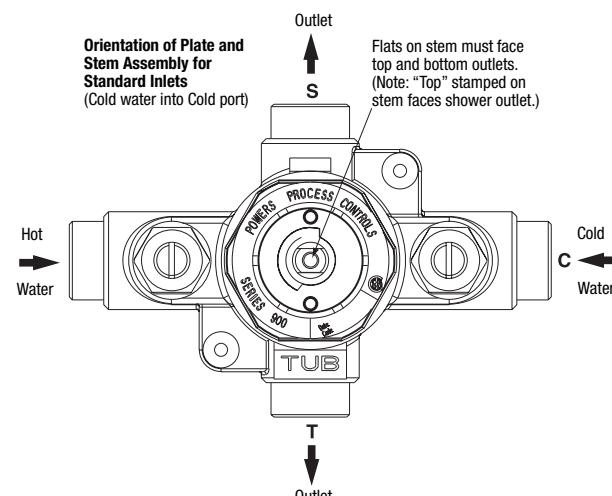

To service mixer, remove handle and dial assembly. Shut off water supply at checkstops. Remove sleeve and O-ring, unscrew bonnet, and remove stem.

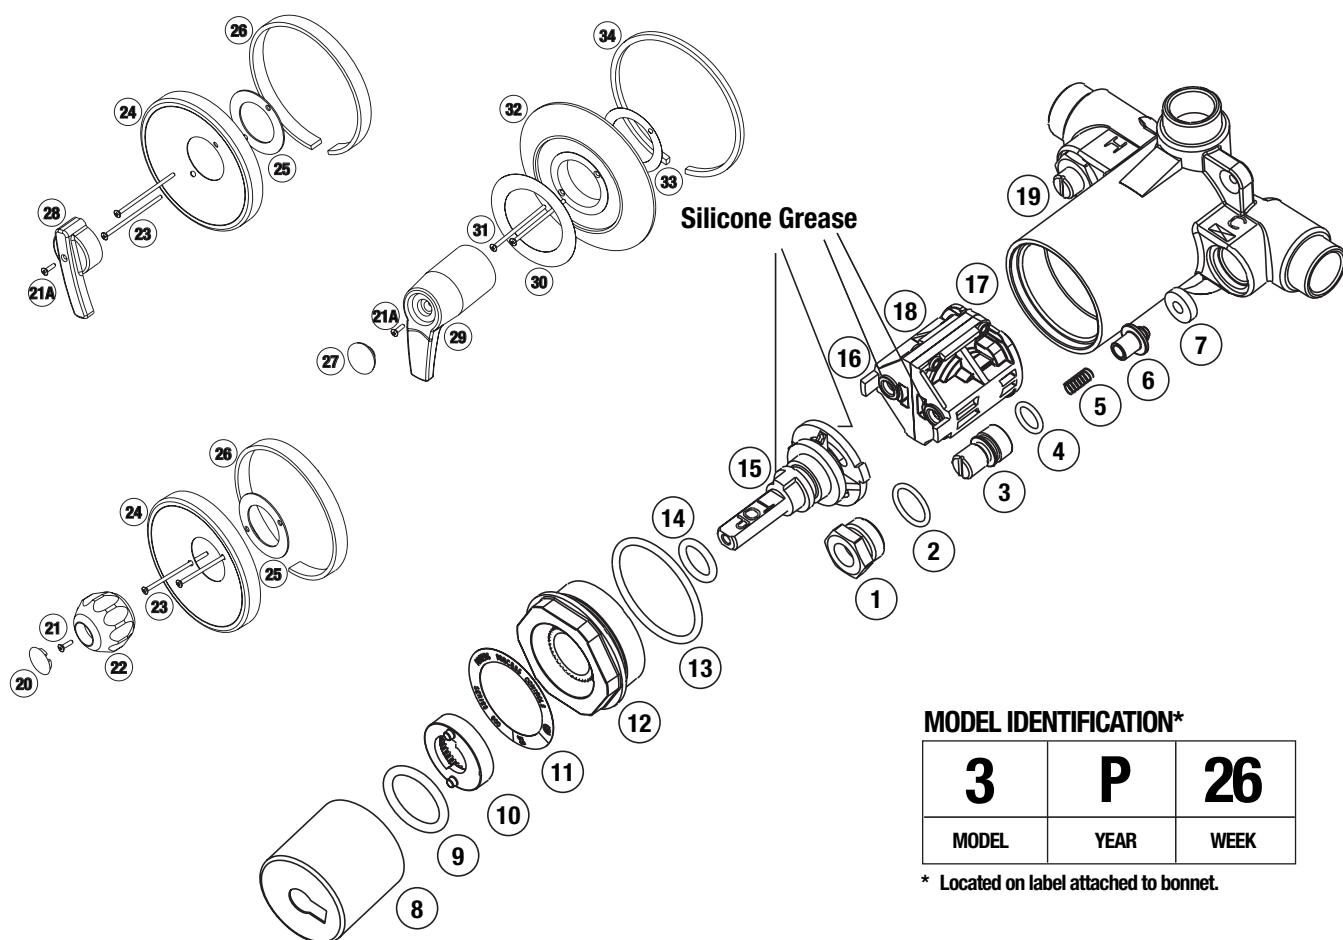

To remove balance chamber, use needle-nose pliers. Pull straight out.

Reassemble; Apply silicone grease to stem assembly (15) at O-ring (14) and mixing plate face. Also apply silicone grease to outlet seal (16). Be certain "TOP" stamped on stem is facing up. Screw bonnet onto body; tighten to 75 in.-lbs. Place O-Ring on bonnet. Slide sleeve over O-Ring. Turn on water at checkstops. Replace dial assembly and handle.

To service checkstops, turn off water supplies upstream of mixer. Unscrew checkstop bonnet nut and remove plunger. Replace items as required.

* 900 132 in Model P910.

** Plug button (#900 140), insert (#900 142), and lucite handle (#900 019) are included in Lucite Handle Assembly Kit #900 035.

N/A = Part not available.

***Parts must be ordered by Kit number, not by individual part number .

TROUBLESHOOTING & REPAIR KITS

Description	Troubleshooting	Repair Kit No.
Gasket and Disc Replacement (mixer & checkstops)	<ul style="list-style-type: none"> Water leaks at valve stem and/or bonnet. Water leaks at valve shut-off. Water leaks at checkstop. 	900 030 Models 1 & 2* 900 028 Model 3
Internals Replacement	<ul style="list-style-type: none"> With mixer handle in MID position, hot water flows with cold water checkstop closed or cold water flows with hot water checkstop closed. 	900031A Model 1 900 031 Model 2 900 032 Model 3
Checkstop Replacement	<ul style="list-style-type: none"> Checkstop will not completely shut off. 	900 049 Models 1 & 2 900 050 Model 3
Conversion from 800 Lever Handle to 900 Lever Handle	<ul style="list-style-type: none"> 800 handle will not operate properly. 	800 098**
Conversion from 800 Lucite Knob to 900 Lucite Knob	<ul style="list-style-type: none"> 800 handle will not operate properly. 	800 099**

* Model 1—Use white TFE gasket; Model 2—Use black Viton A O-ring.

** Replacement of Biltmore 800 handle/stem, escutcheon, or cartridge upgrades the valve to a Biltmore 900 Model 2.

ADDITIONAL KITS

ABS Lever Handle Kit (Model 905)	900 105
Faceplate Assembly (Model 905) (chrome finish)	900 102
Faceplate Assembly, Round	900 040
Plug Button with Insert for Lucite Handle	900 140
Plug Button Bulk Pack (25 pieces of 900 140)	900140BP
Stem Extension Kit	900 109
Thin Wall Mounting Kit	900 119
Vandal-Proof Screws (for handle and faceplate)	900 034

MAXIMUM TEMPERATURE SETTING

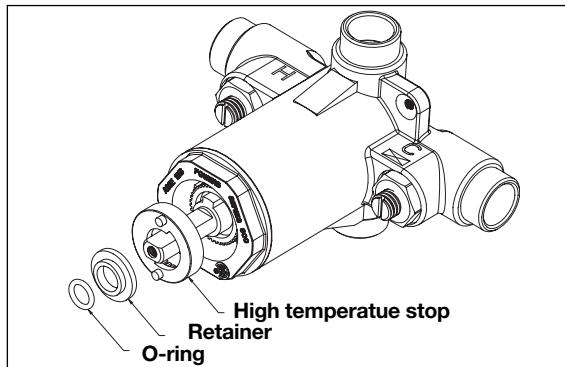

Maximum temperature setting must be set at the job site. High temperature limit stop is located on the bonnet. Remove O-ring and discard. Slide the retainer and the high temperature limit stop out. Rotate stem to desired maximum temperature, but no greater than 115°F (46°C). Slide back the maximum temperature limit stop touching the tab on the stem. Slide the retainer back all the way to secure the high temperature limit stop. Install handle.

The maximum temperature setting must be readjusted if the hot water supply temperature is changed, and **also seasonally to compensate for changes in the cold water supply temperatures.**
