tN4 Gateway 483 - Software Version J1193N

The tN4 Gateway 483 software version J1193N is now available. Key features and improvements include:

- Installs on Mac OS X 10.5 (Leopard), 10.6 (Snow Leopard) and 10.7 (Lion)
- Supports graphing on iPhone and iPad
- Supports tN2 House Control 406
- Supports tekmarNet® Thermostat 552
- Improvements for displaying scene details
- Improvements to system details web page

A new Data Brochure - D483 is available at http://www.tekmarcontrols.com. Free dynamic DNS hosting through No-IP.com is now recommended. Customers can continue to use DynDNS but it is now a subscription pay service.

In addition, the Gateway 483 is now packaged with the Web Host Software installed on a USB drive. The Web Host Software CD has now been discontinued. This allows easy installation on the current generation of Apple Mac Mini computers that no longer have a CD drive.

To update existing 483 remotely over the Internet
1. Login to the Gateway 483 web site.
2. Click "Configuration".
3. Click "Software".
4. Click "Software Update".
The new 483 software will automatically download and install on the computer.

To update existing 483 on site with Mac computer
1. Quit the tekmarNet® Gateway application so that it is no longer running.
2. Download the web host software at http://www.tekmarcontrols.com/tn4/gateway.html
3. Save the file to your computer as a DMG file.
4. Double click to open the DMG file.
5. Double click the "install" icon.
6. Click "Yes" when the dialog box asks to install the tN4 Gateway software.

Sincerely,

Jay Vath
