

Ductile Iron Static Balancing Valves

Series **CSM-82-F** static balancing valves are engineered for effective hydronic system balancing in medium- to high-volume flow HVAC applications.

Sizes
1 1/4 - 12 IN

Features

- Angled globe valve design enables precise and stable flow control for accurate system balancing
- Cylindrical plug design delivers full flow with minimal pressure drop and low operating torque
- Ergonomic handwheel allows for easy adjustment and positive shut-off
- Ductile iron body construction ensures durability and long service life
- Integrated pressure monitoring ports with drip caps support efficient flow measurement and commissioning
- Positive shut-off capability eliminates the need for a separate service valve
- Broad size range (1-1/4 to 12 IN) supports medium to high volume HVAC applications
