Commission with Confidence *ACV Repair, Start-Up, and Optimization*

This VILT session takes participants through the complete **ACV service process**—from safely removing a valve from operation and performing repairs to returning it to service through proper startup and commissioning procedures.

Participants will learn how to **isolate and decommission a valve**, identify common performance issues, and inspect critical components such as diaphragms, seats, discs, stems, and pilot controls. Through a live demonstration, the instructor will walk through valve disassembly, troubleshooting techniques, repair best practices, and methods for identifying the root causes of failure.

Once repairs are complete, the **session transitions into startup and commissioning using an LFM115 pressure reducing valve**. Attendees will observe how pilot adjustments, pressure settings, and system conditions impact valve performance, while learning how to make controlled adjustments, verify proper operation, and address common issues such as hunting, instability, and pressure fluctuations.

By the end of the session, participants will have a **strong understanding of ACV repair procedures**, troubleshooting methods, startup processes, commissioning workflows, and the practical techniques needed to confidently restore valves to reliable operation in the field.
