WATTS[®]

CONNECT. CONTROL. CONSERVE.SM

Superior Value Through Connected Solutions

Back in the day, the only way you knew there was a problem with your plumbing and heating systems was when it failed. Not anymore. Watts Smart and Connected solutions – including digital tools for designing, specifying, and purchasing – are here to help you protect and control your operation. With the Internet of Things (IoT) we can leverage connectivity to be onsite, online, and in touch 24/7, 365.

WiFi thermostats let users adjust room temperatures remotely through an app or with simple voice commands.

WiFi Snow Melting Controls operate hydronic and electric heating equipment to melt snow and/or ice from roads and walkways.

Automated flood protection systems can continuously monitor your RPZ backflow preventer.

Digital mixing systems can connect to your BAS for remote, more precise temperature control.

Smart condensing boilers enable remote monitoring for proactive maintenance.

Watts Connected Solutions

Flood Protection

Watts flood protection system with SentryPlus Alert™ detects potential flood conditions on RPZ backflow preventers, shuts down the water supply, and issues multi-channel alerts so you can take action, all before the water starts rising.

Digital Mixing

Powers IntelliStation® and IntelliStation® Jr. digital mixing solutions enable the safe, efficient delivery of hot water in commercial and institutional facilities. Both offer the advantages of digital technology for controlling and monitoring domestic water at safe, consistent temperatures.

Smart Condensing Boilers

AERCO Benchmark® Platinum Boilers optimize your hydronic system for peak performance and maximum efficiency while reducing install, startup, and operating costs. The Edge® Controller EZ Setup and Combustion Calibration Assist make startup and maintenance a breeze while the Edge Mobile App enables full unit setup and control with enhanced diagnostics and configuration capabilities—allowing you to move around the unit when configuring, diagnosing, and troubleshooting.

Watts Connected Solutions

WiFi Thermostats

tekmar's Invita® WiFi Thermostat uses only two wires to connect the living space to an HVAC Interface Module in the mechanical room and works with most types of heating and cooling systems for ease of installation.

Gas Flow Meters

Dormont FloPro™-MD is a portable gas flow meter that helps service technicians and installers perform equipment start-ups, commissioning, and quickly diagnose gas flow or gas pressure issues to gas burning equipment.

WiFi Snow Melting Control

tekmar's WiFi Snow Melting Control 670 works with the tekmar Snow/Ice Sensor 090 or Snow Sensor 095 to automatically detect snow or ice and operates a single boiler, steam valve, or electric cable to supply heat to the slab. Users can operate and monitor their snow melting system remotely from anywhere in the world with the tekmar Connect app.

Watts Connected Solutions

Watts Pro® Mobile App

Manage assets from the jobsite and keep track of your installations with service notes and automated inspection reminders. Watts® Pro conveniently puts everything you need in the field in the palm of your hand. Whether you're looking for a new product, information about a product you already have, or updates on a project you've worked on before, Watts® Pro has you covered.

Selexit™ Product Configurator

Easily size, configure, select products, and share configurations with colleagues. Selexit is the first and only online platform that can generate precise, optimal Watts system configurations. All you have to do is choose the product category you want to configure, enter required fields specific to your application, and let Selexit handle the configuration results.

SynctaSM Backflow Test Management Software

Syncta is a proven mobile software solution and workflow management tool specifically designed for backflow testers and water purveyors to run all aspects of their business in one centralized location. Spend less time completing test reports and more time growing your business.

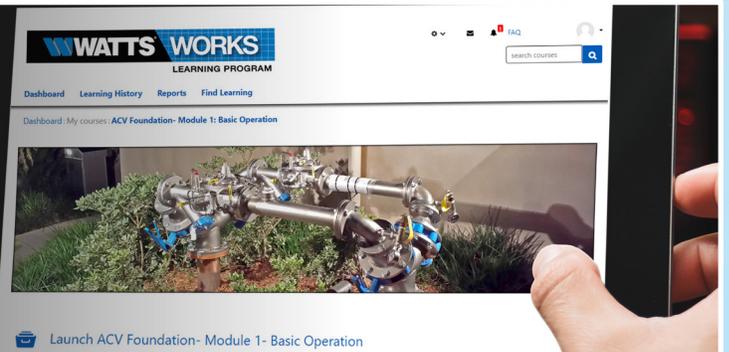

SpecHUB™ Project Specification Tool

SpecHUB is our project specification tool that helps mechanical engineers, architects, interior designers, and design build contractors specify and select Watts products, build project specifications, access BIM files, and stay up to date with the latest product offerings.

Watts Works Online

Watts eLearning system provides access to a wide selection of products and solutions from the Watts family of brands. Courses can be accessed anytime, anywhere; perfect for your busy schedule!

CONNECT. CONTROL. CONSERVE.SM

IoT has enabled us to transform traditional components into modern devices. We understand you want more efficient ways to select, procure, install, and maintain systems; and that's what drives us. Our smart and connected strategy is anchored by a promise to connect you to smart systems, control those systems for optimal performance, and conserve critical resources by increasing operability, efficiency, and safety. Our vision is clear: deliver superior customer value through smart and connected solutions.

Let's Connect

IoT allows us to transform components into smart and connected devices. We understand you want more efficient ways to select, procure, install, and maintain systems. That's why our smart and connected strategy is anchored by a promise to connect you to smart systems, control those systems for optimal performance, and conserve critical resources by increasing operability, efficiency, and safety.

Watts Family of Brands

Watts designs, manufactures, and sells an extensive line of flow control, water safety, water filtration & treatment, drainage, and heating & hot water solutions.

The Watts family of companies provides a single source for solutions used to safely convey, conserve, and manage water.

Making Watts your single source for plumbing-related solutions will streamline your operations, save you money, and reduce the variety of repair parts needed for maintenance.
